

BIPIN KUMAR OJHA

Senior Backend Engineer | Cloud-Native Microservices (Golang / Distributed Systems)

Bangalore, India • +91 8801342002 • bkojha74@gmail.com • <https://www.linkedin.com/in/bipin-kumar-ojha/>

PROFESSIONAL SUMMARY

Senior Backend Engineer & Tech Lead with 19+ years of engineering experience architecting cloud-native microservices, high-throughput distributed architectures, and real-time streaming platforms. Extensive background transitioning from enterprise Java/Spring Boot to high-performance **Python (FastAPI)** and **Golang** microservices, resilient API design, Agentic AI data workflows, and distributed enterprise platforms deployed across **GCP** and **AWS** using **Docker** and **Kubernetes**. Proven record engineering enterprise identity resolution platforms, telemetry pipelines, and telecom solutions leveraging **Google Cloud Spanner**, **GCP Pub/Sub**, **Apache Beam**, MongoDB, and Redis, while enforcing stringent regulatory data governance (FCRA).

CORE COMPETENCIES & TECHNICAL SKILLS

Languages & Protocols:	Python (FastAPI, AsyncIO, Pydantic), Golang , Java/Spring Boot, C/C++, JavaScript; gRPC, RESTful APIs, Protobuf, SS7
Distributed Systems:	Microservices Architecture, Concurrency Patterns, High-Concurrency Identity Resolution, Event-Driven Architecture, Asynchronous IPC
Streaming & Messaging:	GCP Pub/Sub, Apache Beam , Kafka, RabbitMQ, MQTT
Databases & Storage:	Google Cloud Spanner , Google Cloud Storage (GCS), MongoDB, PostgreSQL, Redis (Caching & State), MySQL
Cloud & DevOps:	Google Cloud Platform (GCP) , AWS, Docker, Kubernetes, Jenkins CI/CD, GitLab CI, Git, GitHub Copilot , SonarQube
Governance & Security:	Data Governance & Purposing Policy Enforcement (FCRA Compliance), Keycloak (OAuth2/OIDC), Secure APIs

PROFESSIONAL EXPERIENCE

Senior Go / Backend Developer — Altzor Digital Solutions India Pvt. Ltd.

Mar 2026 – Present

Client: Equifax Inc. | Platform: Keying & Linking (K&L) Platform

- Architected and delivered high-throughput Go microservices and event-driven data pipelines on Google Cloud Platform (GCP) for Equifax's mission-critical Keying & Linking (K&L) identity resolution platform.
- High-Concurrency Identity Resolution (EKS Module):** Engineered distributed Go microservices utilizing worker pools, goroutines, and channels to execute compute-intensive identity-matching algorithms against high-volume consumer datasets stored in **Google Cloud Spanner**.
- Real-time Event Streaming & Async IPC:** Built asynchronous event-driven pipelines utilizing **GCP Pub/Sub** and **Apache Beam** to decouple microservice interactions and process continuous address-linking streams with ultra-low latency.
- Address Library & GCS Integration:** Developed low-latency **gRPC** and **REST APIs** in Go for the Address Library module, automating real-time address normalization and standardizing file ingestion workflows with Google Cloud Storage (GCS).
- EDS Purposing View & Governance:** Designed backend policy-enforcement layers in Go to query Cloud Spanner and enforce granular data-purposing access controls, ensuring full compliance with **FCRA** and statutory data-handling regulations.
- Database Optimization & CI/CD:** Optimized Spanner SQL queries, secondary indexes, and transactional read/writes to maximize throughput across globally distributed tables; automated unit/integration suites in **Jenkins CI/CD**.
- AI-Assisted Development (GitHub Copilot):** Leveraged **GitHub Copilot** to accelerate engineering velocity and test-driven workflows, generating comprehensive Go table-driven test suites, edge-case mocks, and Spanner SQL patterns, increasing unit test coverage and reducing feature delivery cycles.

Senior Backend Engineer (Python / FastAPI & Golang) — QuantiqueMinds Pvt. Ltd.

Sep 2025 – Mar 2026

- Architected and developed high-throughput backend microservices using **Python (FastAPI)** and Golang for SaaS platforms in workspace and restaurant management domains.
- Built asynchronous, non-blocking RESTful APIs with **FastAPI, Pydantic, and AsyncIO**, integrating **MongoDB** (aggregation pipelines, indexing) and Redis for sub-millisecond multi-tenant caching.
- Engineered an IoT device management and telemetry ingestion engine using **Python + MQTT / Message Queues** and AWS IoT Core, processing streaming sensor telemetry for fleet management.
- Integrated Agentic AI / predictive data services in **Python** to analyze real-time telemetry (space utilization, temperature, energy consumption forecasting).
- Containerized microservices using **Docker & Kubernetes**, streamlining automated deployments on AWS through CI/CD pipelines.

Senior Software Engineer — Kenshi Labs Pvt. Ltd.

Jul 2024 – Aug 2025

- Developed the SmartSME Accounting & Inventory cloud platform backend from the ground up in Golang as resilient microservices.
- Optimized transactional data workflows using MongoDB aggregation pipelines and Redis caching for high query concurrency.
- Containerized backend services with Docker, standardizing development environments and deployment pipelines.

Senior Software Engineer / Team Lead — Monty Mobile

Apr 2015 – Apr 2024

- Led backend engineering for the Go-STP distributed telecom platform, substantially improving packet throughput and fault tolerance.
- Architected Multi-IMSI products in Golang/C++ for global roaming, managing complex distributed telecom protocol state machines.
- Engineered secure backend services using PostgreSQL and Keycloak for centralized authentication and access control.
- Mentored junior and mid-level engineers, established code review benchmarks, and drove key architectural decisions.

SS7 Software Engineer / Module Lead — XIUS (Megasoft Ltd.)

Mar 2006 – Apr 2015

- Stabilized and scaled carrier-grade SMS Gateway backends, sustaining high-volume message delivery under extreme peak loads.
- Led a 5-member engineering team to design distributed backend components for roaming and AAA telecom servers.

Software Engineer — Sai Info System (India) Pvt. Ltd.

Apr 2003 – Mar 2006

- Developed enterprise web modules and services using Java and PHP across diverse client engagements.

KEY PROJECTS

Equifax Keying & Linking (K&L) Platform | *Golang, Cloud Spanner, GCP Pub/Sub, Apache Beam, gRPC, GCS, Jenkins*
Engineered core identity resolution algorithms and asynchronous event-driven address linking pipelines on GCP under strict FCRA data purposing and privacy governance rules.

Clay Works IoT & Workspace SaaS (QuantiqueMinds) | *Python (FastAPI), Golang, MongoDB, Redis, MQTT, AWS IoT Core, Docker, CI/CD*
Engineered asynchronous FastAPI microservices and telemetry ingestion pipelines on MongoDB/Redis for real-time device control; integrated Python predictive AI workflows for workspace occupancy and energy optimization.

Go-STP Distributed Telecom Platform (Monty Mobile) | *Golang, C++, PostgreSQL, SS7*
High-availability signaling transfer point engine handling high-volume telecom transaction routing and global roaming.

EDUCATION & CERTIFICATIONS

Education • Master of Computer Applications (MCA) • Bachelor's Degree — Utkal University, Orissa • Diploma in Civil Engineering — SCTE&T, Orissa	Certifications & Continuous Learning • Yuva AI for All — Nasscom FutureSkills Prime (2026) • Introduction to Modern AI — CISCO Networking Academy (Credly, 2026) • Cloud-Native & Emerging Technologies (Participation Certificate)
